Corto

RADIATORS

American Corto Radiators

TODAY'S RADIATORS HAVE BEAUTY

Take the "American" Corto as a standard of radiator beauty. Observe its balanced, graceful, design. An asset in appearance *and* a conveyor of comfort.

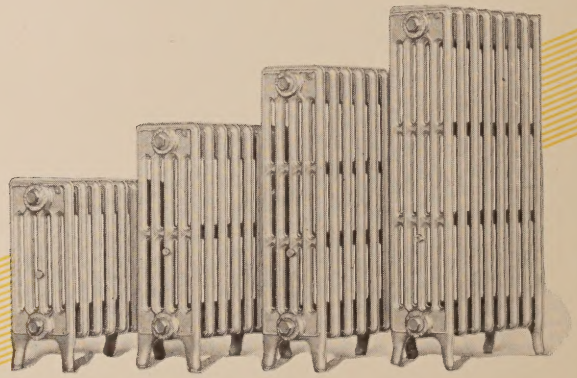
A radiator can be a pleasing feature of any interior. See how its slim, well spaced tubes give the Corto an effect of transparency.

Corto is the original, the classic slender-tube radiator of the world. Designed in France by the engineer-architect Louis Courtot, it is first choice of architects, builders and contractors everywhere, when a free-standing cast iron radiator is desired.

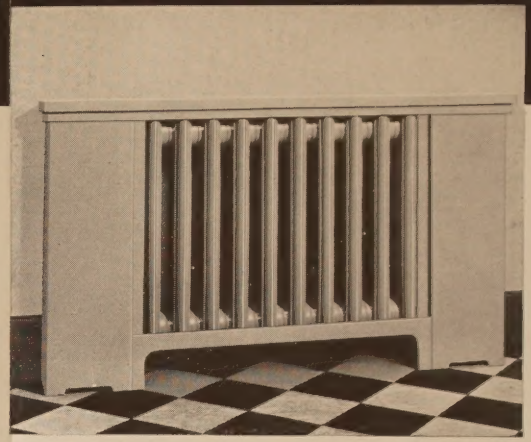
CORTO IS STURDY

Applicable to all radiator heating systems, the Corto Radiator is made of cast iron, is durable and time-tested. Its threaded nipple construction is known for tightness and permanence.

The scientific internal design assures unhampered passage of steam or water. And a factory test of 125 pounds hydraulic pressure guarantees every Corto defect-free.



Corto comes in a complete series of heights and widths, to suit any requirement.



OK ENCLOSURES ARE CONVENIENT

For attractively covering the Corto, and utilizing its top as a console, we suggest the O K Arco Enclosure. This trim metal frame conceals valves and piping and can be installed quickly by the owner. Its scientific design permits the radiator to give *undiminished heat output.* Convenient access to valves is provided.

The O K may also be supplied with an ornamental front, if desired, to conceal the entire radiator. No cutting or fitting is required, for O K Enclosures are made for Corto Radiators of all dimensions.

THE RADIATOR CLASSIC

CLEANLINESS

Sections have been scientifically spaced, to allow proper air flow and to permit accessibility for cleaning. Surfaces are smooth and free from dirt-catching imperfections. As a final hygienic consideration, the radiator when installed gives easy access for cleaning the floor beneath.
